About This Software

LIV StreamerKit is a utility application for SteamVR is fully compatible with any SteamVR headset. It was built to be highly performant

StreamerKit brings your **VR livestream chats & alerts** into your VR headset.

Compatibility

We currently only support *Twitch* as a platform, and *StreamLabs* as an alerts provider. We'll be adding support to more platforms (*Facebook+YouTube*), and alerts providers (*StreamElements)*.

Chat Controls

You can set your chat to be attached to one of your hands, or to follow your head movement. You can change the smoothing and how the chat window follows your head.

More controls to be added.

Chat Controls

Alerts always show up in your main view. You can filter our alerts you don't want (ex: don't show *follower alerts*).

More behaviors to be added.

Why we built it

We built LIV StreamerKit because we needed a lean and CPU/GPU efficient solution, and because we need in-VR controls for some of the other LIV features that we have coming soon, including and not limited to: scene controls in OBS, voice controls for our spectator cameras and a VR iron-man like HUD for your live streaming needs.

Title: LIV StreamerKit
Genre: Utilities, Video Production, Early Access
Developer:
LIV Inc
Publisher:
LIV Inc
Release Date: 18 Feb, 2019

 a09c17d780
